

Presto

Real-time analytics and visualization for faster and better decisions

Mashups made easy: point, click, mash, done

To make the right decision at the right time, you need the latest data from many sources. Now you can combine data from any source to see your most important indicators in real-time anytime. Quickly create mashups with live data that can be shared with desktop and mobile devices as well as in SharePoint® and portals.

Presto from Software AG delivers real-time operational insight dashboards direct from live information sources. You can combine data from any original source—data warehouses, news feeds, social media, Business Intelligence (BI) systems, streaming big data and even Microsoft® Excel® spreadsheets—to create real-time mashups for right-time decision-making.

Once a mashup is created, you can share it with people on tablets, smartphones, portals, websites and SharePoint—all from the same app built for the desktop.

Unlike other BI and data visualization tools, Presto requires no data to be copied, stored or re-housed. That makes Presto faster while allowing it to handle data other BI analytics platforms just can't.

Key Benefits

- Combine fresh data from any source to create real-time mashups
- Set up new apps and dashboards in hours—even minutes
- Build a mashup once, run it anywhere—on portals, websites and mobile devices—with the look-and-feel of your platform
- Measure continuous business impact with easy access to real-time KPIs and metrics
- Rely less on IT—anyone can create a mashup and easily share it with anyone
- Safe and secure—no data is stored on any device

Presto can combine data from different applications to create mashups that can be displayed on any device.

Features

Live, multi-source connectivity

Presto combines data from any source for data visualizations in real-time. Accessing the original data lets business users respond to changing conditions as they happen. One of Presto's strengths is the ability to accept unstructured data, like a social media feed, and keep it updated in real-time.

Simple, powerful data mashing

Presto's "point-click-connect" assembly tool makes it easy to bring together and manipulate data from multiple existing systems into meaningful data visualizations. Simple, powerful data mashing means IT and power users can create new apps and dashboards in hours—even minutes—and share them faster than ever through the secure AppDepot.

Real-time interactive dashboards

Easy-to-use tools foster the real-time collaboration now critical to competitive advantage. Savvy business users create their own real-time interactive dashboards and share what they've done with less dependence on IT.

Optimized for mobile

Presto's apps capitalize on HTML5 to run anywhere in SharePoint, portals, websites and mobile devices with the look-and-feel of your platform. You can even simulate your app on each device as you're building it and then save it specifically for laptop, tablet and/or smartphone. Optimized to offer the interactive qualities of mobile, "point-and-click" becomes "tap-and-drag."

Extensible, embeddable and secure

Not only can you connect live to any of your data sources, Presto's design allows you to plug in custom or third-party components as well as embed Presto in your own application. Plus, real-time governance and security adhere to IT policies. And no data is stored on any device.

Presto's apps capitalize on HTML5 to run anywhere in SharePoint, portals, websites and mobile devices with the look-and-feel of your platform.
